- **March 26th** – 11:30, EPA INFORMATION SESSION, Central Portland (TBD)

Community Questions/Concerns:

- Cost – who bears burden tax payer or industry? Rate payer, industry, allocation process?
- Which alternatives include CDF?
- Word “Transient” is offensive, EPA should not use that term to describe people who live along the river.
- How is EPA working to interface Portland’s 30 year plan? Is there any mention of Superfund in City’s comprehensive Plan? (City said they need to see PP and determine how to include)
- Air quality monitoring? What is being done? (NP Chairs asked for more air quality monitoring)
- 5 options have been proposed: We want Increase dredging to 1000 acres, G+ is what is being recommended by Citizens advisory group, Willamette Riverkeeper, and Yakama Tribe (although Yakama not there to speak)
- Which proposal get us more edible fish? Conduct a study using G+ alternative to see additional amount of fish that can be consumed in comparison to F.
- Earthquake – which of the alternatives guarantee that re-release will not happen during earthquake?
- What is in place to make sure cleanup happens in future? Is it enforceable? ROD
- What type of treatment technologies are available?
- Will we take into consideration climate change into Proposed plan?
- Should we comment on where the dredge material goes? Yes
- Have we set specific goals for each alternative?
- Will EPA let industry monitor themselves during cleanup activity?

- Do we consider the number of green jobs created for each alternative? More dredge-more jobs??
- Will we ever get to no risks?
